

All functions are included in the tool with the following limitations:
TEST is inserted before the barcode and only sample addresses are available for selection as senders.

1. System requirements:

The tool can be used with Windows 7 and Excel 2007 or higher.

The tool does not run under Open-Office or Libre-Office.

2. Download content:

- Font for creating the barcode Code 128 (Code-128-S-Logitogo.ttf)
- Programme as exe file (gs1-transportetikett-x.xx.exe)
- This instruction manual as *.pdf

3. Installation on PCs or servers

The software is developed for local single-user installations, no guarantee can be given for network installations. However, the software is often also functional on servers - please test this with the test version from the homepage before purchasing.

Before installing any software, it is always advisable to make a data backup.

3.a Installing the barcodefont

Install the font in the download (Code-128-S-Logitogo.ttf) in administrator mode.

Under Windows 7/8/10/11: Right mouse click on the unzipped ttf file>Install (if necessary, install as "Administrator").

Logitogo GS1-Etikettentool TESTVERSION

4. Fill in data:

In the worksheet "Datenbank", fill in your data records for articles and customers in the green area.
Only the green areas are always released for input.

Artikel						Name / Kunde									
Nr.	Bezeichnung (max 30 Zeichen)	GTIN / EAN 14 Stellen	Artikelnummer	Menge (B Ziff.)	Gewicht (G Ziff.)	Nr.	Kundenname	Strasse	PLZ (+Ort)	Ort	Warehouse(RDC)	Country	Logistics

5. Select record

The record can be selected with the scroll bars, by entering in the "No." field, with [F9], [F10], [F11] or [F12] or by double-clicking in the desired line of the database.

6. Select label layout (in the worksheet "EingabeX.X" from line 228)

In the worksheet "EingabeX.X" below the input mask, from line 200 onwards, there is a selection option for the different label layouts. There are currently 15 different layouts to choose from.

7. Select printer (in the worksheet "EingabeX.X" at line 200)

In the Printer Selection area, any local printer can be installed.

The printer is stored in the tool permanently and independently of the installed default printer.

Three layouts are additionally developed for Zebra label printers (2.6/ 3.1/ 3.2). For this, a printer "Generic / Text only" with the connection data of the Zebra printer must be installed and selected directly from Windows.
In addition, change to Zebra-printer with the button "A4-Laser/Inkjet...".

With the key "Sheet x Label(s)" you can choose whether you want to print one printout with 2 labels (1x2) or 2 printouts with one label each (2x1) or only one label (1x1).

For **PDF printouts**, please select "Microsoft Print to PDF". You will find the printouts with the NVE, date and time as name in the subdirectory of the tool "gs1-pdf-print".

Very good Windows drivers for all thermal printers: <https://www.seagullscientific.com/de/support/downloads/drivers/>
For thermal printers select 2x1 label, rotate it by 90° with "Page setup..." and also adjust the size in the popup.

8. Enter GLN length (in the worksheet "EingabeX.X" at line 217)

Please enter the correct length of your GLN (usually 7-9 digits) and save it.

This prevents the GLN from being accidentally incremented during automatic incrementing.

9. Correct database layout (in the worksheet "EingabeX.X" at line 217)

If the formatting in the database is no longer correct due to copying from external tables, this can be corrected here with the "korrigieren / correct" button (the data remains unchanged).

Druckerauswahl			Seiten-einrich-tung	
1.) Wählen / select				
Drucker speichern/save printer (> 2.)				
2.) Speichern / save			Blatt x Etikett(-en) Sheet x label(-s)	1 x 2
Formatierung korrigieren			GLN Länge	
korrigieren / correct			7-10 Ziffern speichern save	

Informationen:

Zur Auswahl des Artikels Taste [F9] oder [F10], Scrollleiste, Eingabefeld links oben in Datenbank oder Doppelklick in grünen Datenbankbereich nutzen.

Zur Auswahl des Kunden Taste [F11] oder [F12], Scrollleiste, Eingabefeld links oben in Datenbank oder Doppelklick in grünen Datenbankbereich nutzen.

Zum Ausdruck Druckbutton in der Tabelle oder [F6] (mit Erhöhung NVE [F6]) verwenden / Die Standarddruckbuttons sind deaktiviert.

Zum Ausdruck von mehreren Paletten ggf. mit Restmengen nutzen Sie bitte den untersten Druckbutton.

Im Feld NVE kann wahlweise eine manuelle Nummer mit 17 Stellen, eine NVE mit Prüfziffer (18 Stellen) oder direkt mit führender "00" eingegeben/eingescannt werden.

Installation:

Datei in Verzeichnis mit Schreibberechtigung kopieren (z.B. Dokumente).

Barcodefont Code128 mit Administratorrechten installieren und Drucker im Blatt "Eingabe" im Zellbereich B200 auswählen und speichern (Wird im Tool permanent gespeichert).

Wählen Sie die Länge Ihrer GLN und tragen diese im Bereich WZ17 ein. Dies schränkt den Zähler auf die maximale Stellenanzahl ein.

Für Ausdrücke mit Thermotransferdruckern nutzen Sie bitte die sehr guten Druckertreiber unter: <https://www.seagullscientific.com/de/support/downloads/drivers/>

Barcode layout mit 3 Barcodes

Logitogo GS1-Etikettentool TESTVERSION

10. Data input and printout:

The variable data are to be added in the green fields in the input mask.

In the full version, the name of the sender is entered permanently and unchangeably.

If you are sending under different clients, please specify these when ordering. The selection is made at the top left via the scroll bar.

- The printout with simultaneous increase of the NVE is done via the button "Druck & NVE + 1 [F6]".
- For several consecutive labels, use the button "Druck & NVE + 1 for" at the bottom and enter the number of pieces to the right green field.
- In the case of residual pallets, you have the option of entering the residual quantity, the residual weight and, if applicable, the number of remaining cartons and the number of remaining layers. If you only have full pallets, leave the fields empty.

13. Further notes:

- For the NVE and GTIN, red Excel comment corners are visible for brief explanation.
- After each individual printout, the print data is written to a separate Excel file for documentation. This file is created daily and then moved to the subdirectory "gs1-archiv-alt".
- Please remember to make regular data backups. For this purpose you can copy the complete gs1-transportetikettXX.exe into another directory for backup. The data entered is saved completely in the exe file and is therefore quickly available again.

GS1-basics

SSCC / NVE

The GS1 transport label is used for fast and automated goods receipt.

For this purpose, the most important data is converted into barcode.

In order to be able to clearly identify the goods when they are delivered on several pallets, each pallet is assigned a unique number by the shipper.

This 18-digit number (shipping unit number = NVE) is structured as follows:

Daten-bezeichner	Reserveziffer (fix die 3)	GLN-Basisnummer des Versenders	vom Versender zu vergebende laufende Nummer	Prüfziffer - wird vom Tool berechnet
00	3	4012345	00000001	7
00	3	40123456	00000001	9
00	3	401234567	0000001	2

GTIN

The GTIN is a 14-digit number. If only the EAN 8 or EAN13 is available, the number 0 is added before the EAN to 14 digits.
